§ 1 INVESTMENT THESIS

Constellation Energy is the largest nuclear power operator in the United States and the world's largest producer of carbon-free electricity, operating 21 nuclear plants with approximately 22 GW of capacity. The AI datacenter power crisis has transformed Constellation's investment thesis: hyperscalers — facing 500 MW+ power requirements per campus that cannot be served by intermittent renewables — are signing exclusive 20-year power purchase agreements for nuclear output. Constellation's historic milestone: the restart of Three Mile Island Unit 1 (TMI-1, renamed Crane Clean Energy Center) under an exclusive 20-year PPA with Microsoft at premium pricing. Nuclear power is the only 24/7 dispatchable carbon-free electricity source at scale — Constellation owns this chokepoint in the US energy landscape.

■ Blue Lotus Forecast Signal: 90-day price target \$164.94 (upside -40.7%) | P(target reached): 62.7% | BL Score: 12.7500 | Regime: MILD RISK OFF

§ 2 BUSINESS MODEL ARCHITECTURE

Three revenue segments: (1) Nuclear Generation — 21 plants generating ~22 GW; long-term PPAs with hyperscalers (Microsoft TMI-1), utilities, and industrial off-takers; Nuclear PTC (Production Tax Credit, \$15/MWh IRA) provides inflation-protected floor revenue; (2) Commercial Power — wholesale power sales, hedged portfolio; (3) Customer Solutions — retail electricity and gas supply to C&I customers. Nuclear PTC plus premium AI PPA contracts create a layered revenue structure with exceptional cash flow predictability. Constellation earns a premium for '24/7 carbon-free' energy certificates (CFEs) demanded by tech sector.

§ 3 COMPETITIVE MOAT ANALYSIS

Operating 21 licensed US nuclear plants is a regulatory moat that took 30-50 years to build and is effectively impossible to replicate within any investable horizon. NRC licenses, safety culture, workforce expertise, and community relationships compound into an insurmountable entry barrier. TMI-1 restart (2024) proved Constellation can reopen mothballed plants — positioning Byron, Dresden, Quad Cities and other extended-life candidates. The AI PPA pipeline (Google, Amazon interest following Microsoft precedent) creates a multi-decade contracted revenue backlog at above-market rates.

Porter's Five Forces — Critical Materials

FORCE	ASSESSMENT
Rivalry (Industry Competition)	HIGH — Critical materials sector dominated by Chinese state-owned enterprises; Western producers compete with subsidised rivals.
Threat of New Entrants	HIGH — Resource permitting (5-15 years), capex (\$200M-\$2B), and processing expertise create barriers, but timelines matter.
Supplier Power	MEDIUM — Equipment and reagent suppliers; specialised SX-EW and REE separation reagents have limited Western sources.
Buyer Power	MEDIUM-HIGH — Large OEM buyers (GM, Ford, Boeing) have significant negotiating power; government buyers less price-sensitive.
Substitutes	MEDIUM — Battery chemistry evolution (NaS, LMFP) could reduce lithium/cobalt intensity; but REE magnets have no

viable substitute for high-power density.

§ 4 FINANCIAL ANALYSIS

All financial data sourced from BL3 MySQL (snapshot: 2026-08-13) and moomoo OpenD API as at 2026-08-13. Zero training-data market figures used per CIO Absolute Market Data Standing Order 2026-08-13.

4.1 Valuation Metrics

P/E TTM: 27.27x — company is profitable on trailing basis.

Forward P/E: 37.70x — analyst consensus expects forward profitability.

Price/Book: 3.09x — market applies 3.09x premium to book assets.

Net Income TTM: \$2.62B | Source: BL3 MySQL net_income_ttm

EPS TTM: \$7.40 | EPS Forward Estimate: \$90.25

4.2 52-Week Price Range

52-Week High: \$411.04 | 52-Week Low: \$228.63

Current Price \$278.360 sits at 27.3% of 52-week range (0%=52W Low, 100%=52W High) | Source: BL3 MySQL high_52w / low_52w

4.3 Wall Street Analyst Intelligence

§ 5 RISK FRAMEWORK

The following five risk factors have been assessed across probability and severity dimensions within the CivilisationOS Bayesian risk architecture.

RISK FACTOR	SEVERITY	DESCRIPTION
Nuclear Safety Event	CRITICAL	Any US nuclear incident would trigger regulatory review and potential capacity curtailment.
Regulatory & License Extension	MEDIUM	License extensions beyond 80 years require NRC approval; expensive uprate modifications.
IRA Policy Reversal	MEDIUM	Nuclear PTC repeal or modification would reduce revenue floor by ~\$15/MWh.
Natural Gas Competition	MEDIUM	Low natural gas prices compress power market prices, reducing non-PPA revenue.
Plant Operational Risk	MEDIUM	Unplanned outages reduce output; refuelling cycle every 18-24 months is critical path.

§ 6 BLUE LOTUS SUPERFORECASTING

Microsoft TMI-1 PPA (20 years) is the template; Google, Amazon, and Meta nuclear PPA negotiations underway across Constellation portfolio. By 2028: 5-8 additional nuclear plants under hyperscaler PPAs at \$90-120/MWh vs prior grid prices of \$40-60/MWh — transformative margin. By 2033: AI datacentre power demand crisis forces US nuclear capacity expansion; Constellation the only operator with existing permitted sites (Zion, Duane Arnold) for potential restart. By 2038: Constellation is the US power infrastructure backbone for the AI civilisation — an irreplaceable national security asset.

SCENARIO	HORIZON	PRICE TARGET	PROBABILITY	RATIONALE
■ BULL 2028	2028 (~2yr)	\$258.11	30%	Sector tailwinds maximised; financing secured; production ramp on track.
■ BASE 2028	2028 (~2yr)	\$207.88	45%	Execution on plan; commodity prices stable; BL 90d trajectory sustained.
■ BEAR 2028	2028 (~2yr)	\$217.20	25%	Chinese competition or commodity price correction; execution delays.

■ BULL 2033	2033 (~7yr)	\$213.71	25%	Full production at capacity; government offtake; re-rating as strategic asset.
■ BASE 2033	2033 (~7yr)	\$100.20	50%	Critical materials supply chain established; steady revenue compounding.
■ BEAR 2033	2033 (~7yr)	\$116.81	25%	Commodity cycle downturn; competitive substitution; margin compression.
■ BULL 2038	2038 (~12yr)	\$176.94	20%	National champion status; defence and clean energy supply fully secured.
■ BASE 2038	2038 (~12yr)	\$48.29	55%	Mature production; recurring government and OEM supply revenues.
■ BEAR 2038	2038 (~12yr)	\$62.82	25%	Technology disruption reduces commodity demand; margin erosion.

Note: Superforecasting projections use BL 90-day momentum trajectory, compounded annually at scenario-adjusted rates. All base prices from CIO watchlist (2026-08-13). Probability allocations are qualitative estimates. NOT investment advice.
