

Idaho Strategic Resources (IDR)

Idaho Strategic Resources, Inc.

Sector: Gold & Rare Earth Elements Exploration — Critical Materials | Exchange: NYSE American | Country: United States

Live Price: \$31.870 | Report Date: 2026-08-13

CIO Live Price Source: Watchlist Screenshot, 2026-08-13

◆ EXECUTIVE SUMMARY

Live Price (CIO)	\$31.870	Market Cap	\$498.80M
P/E TTM	22.22x	P/E Forward	N/A
P/B Ratio	4.28x	EPS TTM	\$1.14
EPS Forward	N/A	Net Income TTM	\$18.02M
52-Week High	\$54.70	52-Week Low	\$22.31
Dividend Yield	None	Analyst Consensus	Buy
Analyst Price Target	\$45.00	BL 90-Day Target	N/A
BL Score	N/A	Market Regime	MILD RISK OFF

§ 1 INVESTMENT THESIS

Idaho Strategic Resources is a junior gold and rare earth element (REE) explorer operating in the Idaho Cobalt Belt and Lemhi Pass — one of the highest-grade thorium-REE deposits on Earth and historically the largest US source of domestic rare earth supply. The dual-commodity thesis is structurally powerful: (1) Gold production from the Diamond Creek placer provides near-term cash flow to fund exploration; (2) The Lemhi Pass REE district contains monazite-hosted rare earths (neodymium, praseodymium, dysprosium, terbium) critical for permanent magnets in EV motors and wind turbines. As the US seeks to de-risk REE supply from China (which controls >80% of REE processing), domestic deposit holders like IDR gain strategic premium.

§ 2 BUSINESS MODEL ARCHITECTURE

Exploration and junior production model: (1) Diamond Creek — placer gold and hardrock gold production; generates near-term revenue to fund overhead and exploration; (2) Lemhi Pass REE — advance from historical resource through drilling, resource definition, feasibility, and eventual mine permitting; monazite sand hosting Nd/Pr/Dy/Tb; (3) Hoodoo Cobalt — Idaho Cobalt Belt cobalt-copper-gold exploration. Revenue is exploration-stage; gold production is the sole near-term cash generator. Path to REE production requires 5-10 years of permitting and development capital. Strategic partnerships or government offtake (DoD Title III, DPA) would be the catalytic event.

§ 3 COMPETITIVE MOAT ANALYSIS

Lemhi Pass is a historically documented, geologically well-understood monazite REE deposit in a US state with established mining permitting. As one of the few domestically held high-grade REE occurrences, IDR benefits from the geopolitical premium placed on non-Chinese REE supply. The DoD and Department of Energy have explicit mandates to secure domestic REE supply — junior explorers with real US deposits are acquisition targets. Historical mining data and USGS records reduce early-stage exploration risk.

Porter's Five Forces — Critical Materials

FORCE	ASSESSMENT
Rivalry (Industry Competition)	HIGH — Critical materials sector dominated by Chinese state-owned enterprises; Western producers compete with subsidised rivals.
Threat of New Entrants	HIGH — Resource permitting (5-15 years), capex (\$200M-\$2B), and processing expertise create barriers, but timelines matter.
Supplier Power	MEDIUM — Equipment and reagent suppliers; specialised SX-EW and REE separation reagents have limited Western sources.
Buyer Power	MEDIUM-HIGH — Large OEM buyers (GM, Ford, Boeing) have significant negotiating power; government buyers less price-sensitive.
Substitutes	MEDIUM — Battery chemistry evolution (NaS, LMFP) could reduce lithium/cobalt intensity; but REE magnets have no viable substitute for high-power density.

§ 4 FINANCIAL ANALYSIS

All financial data sourced from moomoo OpenD API (snapshot: 2026-08-13) and moomoo OpenD API as at 2026-08-13. Zero training-data market figures used per CIO Absolute Market Data Standing Order 2026-08-13.

4.1 Valuation Metrics

P/E TTM: 22.22x — company is profitable on trailing basis.

Price/Book: 4.28x — market applies 4.28x premium to book assets.

Net Income TTM: \$18.02M | Source: moomoo OpenD API net_income_ttm

4.2 52-Week Price Range

52-Week High: \$54.70 | 52-Week Low: \$22.31

Current Price \$31.870 sits at 29.5% of 52-week range (0%=52W Low, 100%=52W High) | Source: moomoo OpenD API high_52w / low_52w

4.3 Wall Street Analyst Intelligence

Analyst Consensus: Buy | Price Target: \$45.00 | Analysts Surveyed: 1

Buy: 100% | Hold: 0% | Sell: 0%

Analyst Upside vs CIO Price: +41.2%

4.4 Blue Lotus Price Target Cascade

BL Price Targets: Not available in BL3 MySQL ticker_forecasts for this ticker.

§ 5 RISK FRAMEWORK

The following five risk factors have been assessed across probability and severity dimensions within the CivilisationOS Bayesian risk architecture.

RISK FACTOR	SEVERITY	DESCRIPTION
Exploration Stage Risk	HIGH	No defined NI43-101 compliant REE resource; requires significant drilling capital.
REE Development Timeline	HIGH	US mine permitting for REE is 10-15 year cycle; Lemhi Pass is early stage.
Financing Risk	HIGH	Junior explorer dependent on equity markets; dilution risk for shareholders.
REE Price Volatility	MEDIUM	Nd/Pr prices are volatile; Chinese production decisions dominate pricing.
Gold Price Sensitivity	MEDIUM	Diamond Creek revenues depend on gold price; operational cash flow is thin.

§ 6 BLUE LOTUS SUPERFORECASTING

Near-term: Diamond Creek gold production maintains the company. Medium-term catalyst: DoD strategic minerals grant or DPA Title III funding to advance Lemhi Pass resource definition drilling. By 2028: First NI43-101 REE resource estimate at Lemhi Pass could re-rate the stock significantly as a domestic REE asset. By 2033: Strategic partnership with a defence prime or rare earth processor (MP Materials, Energy Fuels) could lead to joint venture development; or acquisition by a larger strategic buyer. By 2038: If Lemhi Pass is permitted and producing, IDR becomes a critical node in US defence REE supply chain.

SCENARIO	HORIZON	PRICE TARGET	PROBABILITY	RATIONALE
■ BULL 2028	2028 (~2yr)	\$105.17	25%	Financing + government offtake catalyst drives re-rating.
■ BASE 2028	2028 (~2yr)	\$47.80	50%	Steady project advancement; exploration de-risking.
■ BEAR 2028	2028 (~2yr)	\$19.12	25%	Dilution and commodity weakness compress valuation.
■ BULL 2033	2033 (~7yr)	\$191.22	20%	Mine in production; strategic acquisition premium.
■ BASE 2033	2033 (~7yr)	\$71.71	55%	Project in development or early production.
■ BEAR 2033	2033 (~7yr)	\$15.30	25%	Project abandoned or severely diluted.

Note: Scenario prices are qualitative estimates — no BL price targets available for this ticker. NOT investment advice.
