§ 1 INVESTMENT THESIS

NioCorp Developments is advancing the Elk Creek Niobium-Scandium-Titanium Project in southeast Nebraska — the most advanced primary niobium deposit in North America and one of the only proposed primary scandium mines in the Western world. Niobium is a strategic metal used in high-strength low-alloy (HSLA) steel (every modern automobile, pipeline, and skyscraper) with 92% of global supply controlled by a single Brazilian company (CBMM). This supply concentration is a critical vulnerability for US defence and infrastructure. Scandium, used in aluminium-scandium alloys for aerospace and solid oxide fuel cells, has essentially no non-Russian, non-Chinese primary supply in the West. Elk Creek would simultaneously address both supply chain crises.

§ 2 BUSINESS MODEL ARCHITECTURE

Single-project development model: Elk Creek niobium-scandium-titanium project, Nebraska. Proven & Probable mineral reserve defined. Niobium product: ferroniobium (FeNb) — directly displacing CBMM supply for steel producers; (2) Scandium oxide — aerospace-grade aluminium-scandium alloy market (\$1,200-2,000/kg scandium); (3) Titanium dioxide — pigment and aerospace-grade; (4) Enhanced NioBay — potential rare earth credits from secondary processing. DoD NAMC funding and DPA Title III interest reflect US government urgency. Pre-production; funding through DOE loans and equity. Off-take MoUs signed with steel producers and specialty metal traders.

§ 3 COMPETITIVE MOAT ANALYSIS

Elk Creek is the only advanced-stage primary niobium project in North America outside Brazil. Breaking CBMM's monopoly is a US national security priority — the DoD has recognised Elk Creek as strategically critical. Scandium's near-zero Western supply means Elk Creek would capture an immediate market premium; ScAl alloys cannot scale without Western scandium supply. Nebraska location provides logistical access to US steel mills and automotive supply chains without import dependencies.

Porter's Five Forces — Critical Materials

FORCE	ASSESSMENT
Rivalry (Industry Competition)	HIGH — Critical materials sector dominated by Chinese state-owned enterprises; Western producers compete with subsidised rivals.
Threat of New Entrants	HIGH — Resource permitting (5-15 years), capex (\$200M-\$2B), and processing expertise create barriers, but timelines matter.
Supplier Power	MEDIUM — Equipment and reagent suppliers; specialised SX-EW and REE separation reagents have limited Western sources.
Buyer Power	MEDIUM-HIGH — Large OEM buyers (GM, Ford, Boeing) have significant negotiating power; government buyers less price-sensitive.
Substitutes	MEDIUM — Battery chemistry evolution (NaS, LMFP) could reduce lithium/cobalt intensity; but REE magnets have no viable substitute for high-power density.

§ 4 FINANCIAL ANALYSIS

All financial data sourced from moomoo OpenD API (snapshot: 2026-08-13) and moomoo OpenD API as at 2026-08-13. Zero training-data market figures used per CIO Absolute Market Data Standing Order 2026-08-13.

4.1 Valuation Metrics

P/E TTM: -9.00x — company is loss-making on TTM basis (negative P/E).

Price/Book: 1.74x — market applies 1.74x premium to book assets.

Net Income TTM: \$-52.41M | Source: moomoo OpenD API net_income_ttm

4.2 52-Week Price Range

52-Week High: \$12.58 | 52-Week Low: \$3.50

Current Price \$5.255 sits at 19.3% of 52-week range (0%=52W Low, 100%=52W High) | Source: moomoo OpenD API high_52w / low_52w

4.3 Wall Street Analyst Intelligence

Analyst Consensus: Buy | Price Target: \$12.33 | Analysts Surveyed: 4

Buy: 100% | Hold: 0% | Sell: 0%

Analyst Upside vs CIO Price: +134.6%

4.4 Blue Lotus Price Target Cascade

BL Price Targets: Not available in BL3 MySQL ticker_forecasts for this ticker.

§ 5 RISK FRAMEWORK

The following five risk factors have been assessed across probability and severity dimensions within the CivilisationOS Bayesian risk architecture.

RISK FACTOR	SEVERITY	DESCRIPTION
Financing Risk	CRITICAL	Elk Creek capital cost ~\$1B+; project financing not fully secured; DOE loan conditional.
Single Project Concentration	HIGH	Entire company value dependent on one project; no revenue diversification.
Niobium Price Uncertainty	MEDIUM	CBMM controls global pricing; could compete aggressively to protect market share.
Construction & Ramp Risk	MEDIUM	Mining project execution risk; timeline slippage is common at this stage.
Scandium Market Depth	MEDIUM	Scandium market is thin; NioCorp must develop demand as well as

supply.

§ 6 BLUE LOTUS SUPERFORECASTING

DOE loan guarantee decision is the critical near-term catalyst — US government backing would unlock project financing and validate the national security thesis. By 2028: If financing secured, Elk Creek construction commences; first niobium production; ScAl alloy off-take agreements with Boeing/Airbus supply chain. By 2033: Elk Creek at full production; first US domestic niobium supply competing with CBMM; scandium market development accelerates. By 2038: NioCorp is a critical US defence supply chain asset — HSLA steel, aerospace alloys, and SOFC fuel cells all depend on Elk Creek.

SCENARIO	HORIZON	PRICE TARGET	PROBABILITY	RATIONALE
■ BULL 2028	2028 (~2yr)	\$17.34	25%	Financing + government offtake catalyst drives re-rating.
■ BASE 2028	2028 (~2yr)	\$7.88	50%	Steady project advancement; exploration de-risking.
■ BEAR 2028	2028 (~2yr)	\$3.15	25%	Dilution and commodity weakness compress valuation.
■ BULL 2033	2033 (~7yr)	\$31.53	20%	Mine in production; strategic acquisition premium.
■ BASE 2033	2033 (~7yr)	\$11.82	55%	Project in development or early production.
■ BEAR 2033	2033 (~7yr)	\$2.52	25%	Project abandoned or severely diluted.

Note: Scenario prices are qualitative estimates — no BL price targets available for this ticker. NOT investment advice.
