## § 1 INVESTMENT THESIS

AngloGold Ashanti is the world's third-largest gold producer by output and has undergone a fundamental repositioning through the 2024 acquisition of Centamin (Sukari mine, Egypt — one of Africa's largest gold mines) and the re-domicile from South Africa to the United Kingdom. The strategic thesis is a deliberate pivot from high-cost, high-risk African jurisdictions toward higher-quality assets: the Obuasi mine (Ghana) restart, Tropicana (Australia, 70%), Silicon Valley (Nevada, USA exploration), and Sukari (Egypt, now 100%). AngloGold's Bowdoin discovery in Nevada (exploration stage) could be a tier-1 deposit in the world's most gold-friendly jurisdiction. The company generates substantial FCF at \$2,500+ gold, enabling the transformation from a legacy South African gold miner into a globally diversified, premium-listed gold major.

■ BL Signal: 90d target \$108.30 (+14.2%) | P=67.0% | BL Score: 17.0000 | Regime: MILD RISK OFF

---

## § 2 BUSINESS MODEL ARCHITECTURE

Operating mines across four continents: (1) Africa — Obuasi (Ghana, underground high-grade restart, ~250,000 oz/year); Tropicana (Australia, 70%, ~230,000 oz/year); Sukari (Egypt, 100%, ~490,000 oz/year after Centamin acquisition); (2) Americas — Cerro Vanguardia (Argentina, 92.5%); Mponeng (South Africa, sold to Harmony, transitioning); (3) Exploration — Silicon (Nevada, USA, ultra-high-grade discovery). Total production target: 2.7-2.9 Moz Au/year by 2025-2026. Revenue: gold doré and concentrate sales (spot); AISC guidance: ~\$1,450-1,550/oz (higher than Agnico/Barrick due to West African and Egyptian operating costs).

---

## § 3 COMPETITIVE MOAT ANALYSIS

Sukari is a world-class asset: 15 Moz+ remaining reserve, 17-year mine life, operating in Egypt (politically stable, government supportive of mining investment). Obuasi underground (world's highest-grade active gold mine at ~7 g/t Au) is a generational resource that was restarted after illegal mining clearance — 10+ year mine life at high grades. Tropicana (Western Australia) operates in the world's best mining jurisdiction alongside AEM/Barrick/Newmont assets. Silicon (Nevada) exploration, if proved, would be the company's first US Tier-1 asset — a premium valuation re-rating catalyst.

### Porter's Five Forces — Gold & Silver Mining

| FORCE          | ASSESSMENT                                                                                                                               |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Rivalry        | HIGH — Top 5 gold majors (Newmont, Barrick, Agnico, AngloGold, Gold Fields) compete for acquisition targets and investor capital.        |
| New Entrants   | LOW — Mine permitting 10-20 years; sovereign risk; metallurgical complexity; capital intensity (\$500M-\$5B+) deter new entrants.        |
| Supplier Power | MEDIUM — Reagents (cyanide, lime), explosives, and mining equipment (Caterpillar, Sandvik) — multi-year contracts; limited alternatives. |
| Buyer Power    | LOW-MEDIUM — Gold/silver sell at spot (LBMA/COMEX); no single buyer; refiners and central banks buy at market price.                     |
| Substitutes    | LOW — No substitute for gold/silver in monetary, investment, or industrial applications (conductivity, corrosion resistance).            |

## § 5 RISK FRAMEWORK

Five risk factors assessed within the CivilisationOS Bayesian risk architecture.

| RISK FACTOR              | SEVERITY | DESCRIPTION                                                                              |
|--------------------------|----------|------------------------------------------------------------------------------------------|
| Africa Geopolitical Risk | HIGH     | Ghana (Obuasi), Egypt (Sukari), and Argentina (CVG) carry political and regulatory risk. |

|                             |               |                                                                                      |
|-----------------------------|---------------|--------------------------------------------------------------------------------------|
| AISC vs Peers               | <b>MEDIUM</b> | AngloGold AISC is above Agnico and Barrick; margin compression at lower gold prices. |
| Silicon Exploration Risk    | <b>MEDIUM</b> | Silicon Nevada discovery is still exploration stage; resource definition multi-year. |
| South Africa Legacy Assets  | <b>LOW</b>    | Mponeng sale complete; South African legacy risks largely divested.                  |
| Integration Risk — Centamin | <b>MEDIUM</b> | Sukari integration and Egyptian tax/royalty structure require careful management.    |

## § 6 BLUE LOTUS SUPERFORECASTING

Sukari production optimisation (Centamin integration) adds ~490,000 oz/year at moderate AISC — transformative for AngloGold. Silicon (Nevada) resource definition drilling 2024-2026 could deliver a tier-1 US gold reserve estimate. By 2028: AngloGold at 3.0+ Moz/year; Nevada exploration result determines whether a new mine development enters the pipeline. By 2033: Potential Silicon mine development (if tier-1 resource confirmed); AngloGold completes transformation into a multi-jurisdiction gold major with North American exposure. By 2038: Obuasi and Sukari mature; Nevada asset in production.

| SCENARIO           | HORIZON     | PRICE TARGET | PROBABILITY | RATIONALE                                                           |
|--------------------|-------------|--------------|-------------|---------------------------------------------------------------------|
| ■ <b>BULL 2028</b> | 2028 (~2yr) | \$145.27     | 30%         | Gold \$3,000+ / Silver \$40+; all expansion catalysts hit.          |
| ■ <b>BASE 2028</b> | 2028 (~2yr) | \$104.02     | 45%         | Gold \$2,500-2,800; silver \$28-35; BL trajectory sustained.        |
| ■ <b>BEAR 2028</b> | 2028 (~2yr) | \$73.99      | 25%         | Gold correction to \$1,800-2,000; risk-on reduces safe haven flows. |
| ■ <b>BULL 2033</b> | 2033 (~7yr) | \$421.94     | 25%         | De-dollarisation accelerates; gold \$3,500-4,000; silver re-rated.  |
| ■ <b>BASE 2033</b> | 2033 (~7yr) | \$131.10     | 50%         | Gold \$3,000+; steady mine production; FCF compounding.             |
| ■ <b>BEAR 2033</b> | 2033 (~7yr) | \$39.79      | 25%         | Global deflation; USD strengthens; precious metals de-rated.        |

|                    |              |           |     |                                                              |
|--------------------|--------------|-----------|-----|--------------------------------------------------------------|
| ■ <b>BULL 2038</b> | 2038 (~12yr) | \$1225.54 | 20% | Gold \$5,000+; silver \$80+; multipolarity fully priced in.  |
| ■ <b>BASE 2038</b> | 2038 (~12yr) | \$165.22  | 55% | Gold \$3,500-4,500; mature production; dividends sustained.  |
| ■ <b>BEAR 2038</b> | 2038 (~12yr) | \$21.40   | 25% | New energy metal replaces gold as safe haven; gold de-rated. |
