§ 1 INVESTMENT THESIS

Coeur Mining is a mid-cap precious metals producer with a diversified portfolio of silver-gold mines entirely within the Americas: Palmarejo (Mexico, silver-gold), Rochester (Nevada, USA, silver-gold heap leach expansion), Kensington (Alaska, USA, gold), Wharf (South Dakota, USA, gold heap leach), and the recently acquired SilverCrest Metals' Las Chispas mine (Sonora, Mexico — one of the world's highest-grade silver-gold deposits). The SilverCrest acquisition (2025) is transformational: Las Chispas produces ~10-12 Moz silver equivalent at world-class grades (1,200+ g/t AgEq), dramatically increasing Coeur's production quality and silver leverage. Coeur is the most silver-weighted of the major silver companies, providing maximum leverage to the silver price cycle. At \$30+/oz silver and \$2,500+/oz gold, Coeur transitions from marginal to high-margin producer.

§ 2 BUSINESS MODEL ARCHITECTURE

Five operating mines (post-SilverCrest acquisition): (1) Las Chispas (Sonora, Mexico) — ultra-high-grade silver-gold underground; ~10-12 Moz AgEq/year; (2) Palmarejo (Chihuahua, Mexico) — silver-gold; ~6-7 Moz AgEq/year; (3) Rochester (Nevada, USA) — heap leach expansion to Phase 4 (crushing/stacking upgrade); ~7-8 Moz AgEq/year; (4) Kensington (Alaska, USA) — underground gold; ~90-100 Koz Au/year; (5) Wharf (South Dakota, USA) — gold heap leach; ~90-100 Koz Au/year. Revenue: silver doré and concentrate sales (LBMA spot); gold doré sales (spot). AISC guidance varies by mine; Las Chispas is the lowest cost asset.

§ 3 COMPETITIVE MOAT ANALYSIS

Las Chispas is a world-class asset: 1,200+ g/t AgEq grade (vs industry average ~150 g/t) creates unit economics that are superior to all but a handful of silver mines globally. Rochester Phase 4 expansion (crushing system upgrade) transforms the largest silver mine in the US from a low-recovery run-of-mine heap leach to a high-recovery crush/agglomerate system, potentially doubling recoveries and silver output. Fully US-based operations (Rochester, Kensington, Wharf) provide jurisdictional premium and IRA-related domestic silver supply benefits.

Porter's Five Forces — Gold & Silver Mining

FORCE	ASSESSMENT
Rivalry	HIGH — Top 5 gold majors (Newmont, Barrick, Agnico, AngloGold, Gold Fields) compete for acquisition targets and investor capital.
New Entrants	LOW — Mine permitting 10-20 years; sovereign risk; metallurgical complexity; capital intensity (\$500M-\$5B+) deter new entrants.
Supplier Power	MEDIUM — Reagents (cyanide, lime), explosives, and mining equipment (Caterpillar, Sandvik) — multi-year contracts; limited alternatives.
Buyer Power	LOW-MEDIUM — Gold/silver sell at spot (LBMA/COMEX); no single buyer; refiners and central banks buy at market price.
Substitutes	LOW — No substitute for gold/silver in monetary, investment, or industrial applications (conductivity, corrosion resistance).

§ 4 FINANCIAL ANALYSIS

All data from BL3 MySQL (snapshot: 2026-08-13) + moomoo OpenD. Zero training-data figures. CIO Standing Order 2026-08-13.

4.1 Valuation Metrics

P/E TTM: 15.56x — profitable on trailing basis.

Forward P/E: 19.49x

Price/Book: 1.83x

Net Income TTM: \$976.54M | Source: BL3 MySQL

EPS TTM: \$0.95 | EPS Forward: \$10.13

4.2 52-Week Price Range

52-Week High: \$27.74 | 52-Week Low: \$11.22

CIO Price \$18.225 at 42.4% of 52W range | Source: BL3 MySQL

4.3 Analyst Intelligence

Consensus: Buy | Target: \$22.50 | Analysts: 5

Buy: 80% | Hold: 20% | Sell: 0%

Analyst Upside: +23.5%

§ 5 RISK FRAMEWORK

Five risk factors assessed within the CivilisationOS Bayesian risk architecture.

RISK FACTOR	SEVERITY	DESCRIPTION
Mexico Jurisdiction Risk	HIGH	Las Chispas and Palmarejo in Mexico; López Obrador mining moratorium

legacy; new permit risk.

Rochester Phase 4 Execution	HIGH	Rochester expansion experienced cost overruns; operational ramp is the key near-term risk.
Silver Price Leverage	HIGH	Coeur is highly silver-leveraged; silver price decline directly impacts FCF.
SilverCrest Integration	MEDIUM	Las Chispas integration into Coeur operational framework; cultural and systems integration.
Alaska Operational Risk	MEDIUM	Kensington in remote Alaska; logistics and environmental compliance costs are elevated.

§ 6 BLUE LOTUS SUPERFORECASTING

Las Chispas ramp to full production (post-SilverCrest acquisition) is the near-term catalyst — high-grade ore drives FCF generation. Rochester Phase 4 completion and recovery improvement drive US silver production growth. By 2028: Coeur produces 25+ Moz AgEq/year with Las Chispas + Rochester Phase 4 + Palmarejo; significant FCF at \$30+/oz silver. By 2033: Fully integrated SilverCrest assets; potential further consolidation in the mid-cap silver space. By 2038: Americas-focused silver-gold company with generational assets in Sonora (Las Chispas) and Nevada (Rochester).

SCENARIO	HORIZON	PRICE TARGET	PROBABILITY	RATIONALE
■ BULL 2028	2028 (~2yr)	\$25.52	30%	Gold \$3,000+ / Silver \$40+; all expansion catalysts hit.
■ BASE 2028	2028 (~2yr)	\$18.63	45%	Gold \$2,500-2,800; silver \$28-35; BL trajectory sustained.
■ BEAR 2028	2028 (~2yr)	\$14.22	25%	Gold correction to \$1,800-2,000; risk-on reduces safe haven flows.
■ BULL 2033	2033 (~7yr)	\$59.24	25%	De-dollarisation accelerates; gold \$3,500-4,000; silver re-rated.
■ BASE 2033	2033 (~7yr)	\$19.70	50%	Gold \$3,000+; steady mine production; FCF compounding.
■ BEAR 2033	2033 (~7yr)	\$7.65	25%	Global deflation; USD strengthens; precious

				metals de-rated.
■ BULL 2038	2038 (~12yr)	\$137.52	20%	Gold \$5,000+; silver \$80+; multipolarity fully priced in.
■ BASE 2038	2038 (~12yr)	\$20.82	55%	Gold \$3,500-4,500; mature production; dividends sustained.
■ BEAR 2038	2038 (~12yr)	\$4.11	25%	New energy metal replaces gold as safe haven; gold de-rated.

Note: Projections use BL 90-day trajectory compounded annually. Base prices from CIO watchlist 2026-08-13. NOT investment advice.
