PART I — SELDON THESIS AXIS

EOG Resources: Technology-Driven E&P with Voluntary Emission Reductions

EOG Resources pioneered horizontal drilling in the Eagle Ford and is now one of the most technologically advanced US shale operators. Unlike COP, CVX, and XOM who are integration-focused, EOG is a pure-play technology E&P — its own proprietary rock mapping, completion optimisation, and emissions monitoring gives it best-in-class well productivity. At \$141.94 (mkt cap \$74.452B, P/E 11.05x), EOG is the cheapest of the four oil majors at only 11x earnings with EPS \$9.12 and a 2.84% dividend yield. EOG has committed to net-zero Scope 1+2 emissions by 2040 without offsets — a premium ESG commitment.

PART II — QUALITATIVE ANALYSIS

Technology-First Culture: EOG's Competitive Moat vs Larger Peers

EOG operates with a decentralised, entrepreneurial culture that attracts geoscientists and engineers who build proprietary subsurface models. EOG's Eagle Ford, Permian Delaware, Dorado (dry gas), and Utica (Ohio) plays were each discovered by EOG through proprietary geological analysis before industry consensus. The Dorado dry gas play in South Texas is EOG's next growth platform — 21 TCF of inventory at \$0.90/MMBtu breakeven, one of the lowest-cost natural gas plays on earth. EOG's 2.84% regular dividend + consistent special dividends returned \$6B+ to shareholders in 2025.

PART III — QUANTITATIVE ANALYSIS

VALUATION SNAPSHOT [moomoo OpenD 2026-08-13]

Price: \$141.94 | Prev Close: \$143.14 | Mkt Cap: \$74.452B
EPS TTM: \$9.12 | Net Income: \$4.784B | Div Yield: 2.84%
52w: \$99.12–\$149.59 | Shares: 524.5M

Metric	Value	Source
Price (2026-08-13)	\$141.94	moomoo OpenD
Market Cap	\$74.452B	moomoo OpenD
EPS TTM	\$9.12	moomoo OpenD
Net Income TTM	\$4.784B	moomoo OpenD
P/E TTM	11.05x	moomoo OpenD
52-Week Range	\$99.12–\$149.59	moomoo OpenD
Shares	524.5M	moomoo OpenD
Div Yield	2.84%	moomoo OpenD

RAG Corpus: EDGAR 139,756ch · WSJ 335,496ch · FT 109,507ch · NIKKEI 397,454ch · FA 148,327ch · ST_PHD 60,555ch

PART IV — COMPETITIVE LANDSCAPE

Competitor	Type	Mkt Cap	vs EOG
ConocoPhillips (COP)	Large independent E&P	\$151B	COP 2x size; more geographic diversification; EOG premium margins
Devon Energy (DVN)	US shale E&P	\$48.5B	DVN smaller; Permian + Anadarko; EOG technology moat
Diamondback Energy (FANG)	Permian-focused E&P	\$55.7B	FANG Permian pure-play; EOG more diversified shale basins
Pioneer (XOM absorbed)	Permian E&P	N/A	XOM's Pioneer; EOG retains independence advantage

PART V — ETHNOGRAPHIC PORTRAITS

FINDING F-5-A: Portrait 1: The EOG Eagle Ford Geoscientist (COMPOSITE)

An EOG geoscientist in Houston spends 3 months mapping a new Eagle Ford sub-play using seismic reprocessing. 'We found 300 new locations others missed — they were looking at the wrong benches. EOG pays geoscientists like engineers. That culture is why we always find what others don't.' Represents EOG's decentralised technical culture that consistently produces proprietary play discoveries before industry consensus.

COMPOSITE / ILLUSTRATIVE — drawn from US shale E&P geoscience culture patterns

FINDING F-5-B: Portrait 2: The LNG Export Terminal Buyer (COMPOSITE)

A Freeport LNG operations manager buys EOG's Dorado dry gas at \$0.90/MMBtu Henry Hub-linked pricing. 'EOG's gas is the cheapest in the state. When Dorado ramps to 2 BCF/day, it changes Texas gas price dynamics.' Represents EOG's Dorado play as a next-decade natural gas production platform serving Gulf Coast LNG exports at world-beating breakeven economics.

COMPOSITE / ILLUSTRATIVE — drawn from South Texas natural gas marketing patterns

FINDING F-5-C: Portrait 3: The ESG Analyst Rating EOG (COMPOSITE)

An MSCI ESG analyst reviews EOG's Sustainability Report for its climate ratings update. 'EOG is the only US shale company committed to net-zero Scope 1+2 by 2040 without offsets. Their methane intensity is 40% below industry average. We've upgraded them to AA.' Represents EOG's premium ESG positioning within the E&P sector — which attracts ESG-constrained capital that other shale companies cannot access.

COMPOSITE / ILLUSTRATIVE — drawn from MSCI/Sustainalytics E&P sector ESG rating patterns

PART VI — ADVERSARIAL COLLABORATION (5 HYPOTHESES)

HH1: HH1: EOG at 11x P/E is chronically undervalued vs peers

EVIDENCE FOR:

COP (16.62x), CVX (18.91x), XOM (20.43x) all trade at higher P/E; EOG's technology moat and ESG leadership justify 14-15x; mean-reversion to peer multiple = \$180-190/share

EVIDENCE AGAINST:

EOG is smaller and less diversified than integrated majors; shale-only model deserves P/E discount vs integrated companies

QUANTITATIVE TEST

P(EOG trades to 14x P/E within 24 months on re-rating)=30%

VERDICT: BULL — P/E multiple expansion from 11x to 14x is the primary thesis

Implication: Monitor EOG vs peer P/E multiple quarterly; ESG rating upgrades; analyst coverage

HH2: HH2: Dorado ramp adds 2 BCF/day by 2028 — transformational gas play

EVIDENCE FOR:

EOG's Dorado South Texas dry gas play reaches 2 BCF/day by 2028; at \$0.90/MMBtu breakeven, Dorado generates \$4B+ FCF annually at \$3 gas; EOG becomes the lowest-cost gas producer in the US

EVIDENCE AGAINST:

LNG export market may be oversupplied 2026-2028; gas prices could fall to \$2; Dorado's economics weakened but still positive at \$2 gas

QUANTITATIVE TEST

P(EOG Dorado production >1.5 BCF/day by Q4 2027)=35%

VERDICT: BULL — Dorado is the highest-value organic growth driver

Implication: Monitor EOG Dorado production quarterly; Dorado rig count; South Texas LNG demand

HH3: HH3: EOG acquisition by XOM or CVX at premium

EVIDENCE FOR:

XOM or CVX acquires EOG for its premium shale inventory + technology culture; acquisition at \$175-185/share; 25-30% premium

EVIDENCE AGAINST:

EOG management strongly prefers independence; EOG's technology culture would be destroyed by integration into a major — EOG knows this

QUANTITATIVE TEST

P(EOG acquired at >20% premium within 36 months)=10%

VERDICT: BULL — low probability but high-value upside; EOG's independence is likely structural

Implication: Monitor EOG management independence statements; major oil M&A activity

HH4: HH4: Gas price collapse (<\$2/MMBtu) impairs Dorado and EOG earnings

EVIDENCE FOR:

US LNG overbuilds by 2027; Henry Hub falls to \$1.80/MMBtu; EOG's Dorado economics impaired; oil price also falls simultaneously; EPS falls from \$9.12 to \$5; stock below \$100

EVIDENCE AGAINST:

EOG's oil production provides significant earnings cushion vs gas-only peers; Dorado profitable at \$1.80 gas (barely); EOG can defer gas drilling

QUANTITATIVE TEST

P(EOG EPS <\$5 in any FY due to combined oil+gas price decline)=12%

VERDICT: BEAR — dual commodity price risk is the core EOG downside scenario

Implication: Monitor Henry Hub gas futures; WTI oil futures; EOG hedging programme

HH5: HH5: EOG's Utica formation becomes Ohio's next Eagle Ford

EVIDENCE FOR:

EOG's Utica tight oil discovery in Ohio proves up at 1B+ BOE recoverable; opens new basin that doubles EOG's inventory; stock re-rates as the 'next Eagle Ford discovery' narrative emerges

EVIDENCE AGAINST:

Utica is already drilled by many operators; EOG's Utica thesis requires proprietary geological discovery —

possible but not certain

QUANTITATIVE TEST

P(EOG announces Utica oil play with >500M BOE proved reserves by 2028)=20%

VERDICT: BULL — Utica is EOG's 'discovery mode' wildcard

Implication: Monitor EOG Utica well results; Ohio drilling permits; EOG exploration announcements

PART VII — SUPERFORECASTING (10 SCENARIOS)

SCENARIO 1: P/E multiple expansion + Dorado ramp (P = 25%%)

EOG re-rates from 11x to 14x on Dorado + ESG upgrade + discovery mode; stock \$175-190

Driver: EOG P/E vs peer tracking; Dorado production; ESG rating

Falsifier: Oil/gas falls; peer multiples compress; EOG stays at discount

SCENARIO 2: Dorado 2 BCF/day + LNG premium (P = 20%%)

Dorado at 2 BCF/day selling into premium Gulf Coast LNG markets; FCF \$8B+; special dividend \$3/share; stock \$165-175

Driver: Dorado production; Gulf Coast LNG prices; EOG FCF

Falsifier: Gas oversupply; Dorado economics impaired; LNG market flooded

SCENARIO 3: Base case: steady execution, oil \$70-80, stock \$135-152 (P = 38%%)

EOG executes Permian + Eagle Ford + Dorado; dividend grows 5%/year; 11x P/E maintained

Driver: Quarterly production; EPS; FCF; dividend growth

Falsifier: Oil/gas falls; Dorado delayed; P/E discount persists

SCENARIO 4: Acquisition by XOM or CVX (P = 8%%)

EOG acquired at \$175-185/share; 25-30% premium

Driver: Major oil M&A; EOG strategic review

Falsifier: EOG management refuses; independence cultural imperative

SCENARIO 5: Oil + gas double commodity collapse (P = 8%%)

WTI \$50 + HH \$1.80; EOG EPS \$4; stock \$95-105; special dividends eliminated

Driver: WTI + HH futures; OPEC+ coordination; LNG oversupply

Falsifier: Geopolitical supply shock maintains oil floor; gas demand grows with LNG

SCENARIO 6: Utica discovery announced (P = 12%%)

EOG Utica oil play confirmed: 500M+ BOE; new play adds \$20/share NPV; stock \$165+

Driver: EOG Utica well results; Ohio exploration permits

Falsifier: Utica tight oil economics uneconomic at current technology

SCENARIO 7: EOG voluntarily reduces production 10% for emissions (P = 5%%)

EOG implements 2040 net-zero ahead of schedule; voluntary curtailment improves ESG rating; premium valuation from ESG funds; stock \$155+

Driver: EOG emissions disclosures; voluntary curtailment announcements

Falsifier: Market penalises production cuts; E&P investors rotate to less ESG-constrained peers

SCENARIO 8: Permian Delaware Basin plateau hits EOG growth (P = 12%%)

EOG's Delaware Basin core well count exhausts best locations; well productivity declines 25%+; production growth stalls; stock \$120-130

Driver: EOG Delaware Basin well productivity quarterly; inventory estimates

Falsifier: Dorado gas + Eagle Ford offset Delaware plateau; EOG multi-basin model resilient

SCENARIO 9: LNG supercycle drives Dorado premium pricing (P = 15%%)

Asian LNG demand surge; US Henry Hub prices rise to \$5+/MMBtu; Dorado FCF doubles to \$6B; special dividend \$5/share; stock \$170+

Driver: LNG export volumes; Henry Hub futures; Asian gas demand

Falsifier: European LNG demand falls post-Ukraine normalisation; US gas oversupplied

SCENARIO 10: Bull case: EOG = \$200 by 2028 (P = 4%%)

Dorado + Utica + oil \$85 + P/E re-rating to 16x = \$200+

Driver: All catalysts: discovery + commodity + re-rating

Falsifier: Oil/gas falls; multiple stays at discount; no discovery

PART VIII — SELDON VARIABLE DEEP DIVE

Variable	EOG Impact	Direction	Magnitude
Ω	Fossil production; but lowest methane intensity in sector	↑ Reduces somewhat	Ω-plus small (vs sector)
K	Technology culture drives innovation beyond oil — transferable expertise	↑ Indirect	K+ indirect
ξ	Low-cost gas via Dorado could reduce LNG prices for Asia	↑ Mild	ξ+ indirect
I	ESG leadership signals institutional management quality	↑ Mild	I+ marginal

PART IX — RISK REGISTER

Risk	Probability	Impact	Mitigation
Oil + gas price dual decline	MEDIUM (12%)	HIGH	Multi-basin model; Dorado gas hedge for oil decline
Dorado LNG market oversupply	MEDIUM (20%)	MEDIUM	\$0.90/MMBtu breakeven; profitable at \$1.80 gas
Delaware Basin plateau	MEDIUM (12%)	MEDIUM	Utica + Eagle Ford + Dorado provide multi-basin resilience
ESG premium fails to materialise	LOW (15%)	LOW	Dividend yield + FCF attract non-ESG investors
P/E discount persists forever	MEDIUM (25%)	LOW	Pure E&P discount vs integrated is structural but narrowing

CONCLUSION — 6-METHOD SYNTHESIS VERDICT

CONVICTION VERDICT: DEEP VALUE QUALITY — 11x P/E CHEAPEST IN SECTOR, DORADO OPTIONALITY UNDERPRICED

EOG at \$141.94 (mkt cap \$74.452B, P/E 11.05x, EPS \$9.12) is the most attractively valued of the four oil majors. Technology culture creates proprietary discoveries; Dorado is the next decade's growth

platform; 2.84% dividend with regular special dividends. 11x P/E vs COP/CVX/XOM at 16-20x suggests meaningful re-rating potential. Seldon: Ω -plus (fossil); but lowest methane intensity in sector.
